

High-Tech, High-Touch, TouchFax®

See and touch the new wall-mount
TF-400 at PACE 92, Booth 316

EXHIBIT

■ TouchFax. Today the world's best-selling public fax terminals are accepted as a standard in North America and Europe. Tomorrow the modular design of TouchFax terminals will deliver new technologies, including Group IV, video and ISDN.

■ The proprietary TouchFax interface is easy to use for anyone who can use a telephone. Touch screen services include phone, fax, plain paper copies, airline flight schedules and a growing menu of information services. The optional keyboard and RJ-11 data port provide interactive access to private e-mail, word processing and a universal connection to computer-based services.

■ TouchFax integrates proven technologies and innovative design in a user-friendly kiosk. The ADA-compliant TouchFax TF Series includes freestanding and wall-mount models for almost any location requirement. Behind the scene, TouchNet® network management software makes it easy for operators to remotely manage thousands of terminals.

■ Integrated terminals, user interface design and network management systems: TouchFax invented the way to deliver the future in public communications.
